LET YOUR INTEGRATION LANDSCAPE REACH ITS POTENTIAL

Forget the frustration caused by complex system integrations. Nodinite is always aware and from day one, so are you. While your systems communicate with each other, it takes care of everything from logging to monitoring. You save precious time and can focus on your core business.

All-in-one solution made for you

What you previously needed several products for, you now only need one. Nodinite takes care of all aspects concerning your integration platforms, while you save both time and money. It is both easy to install and easy to manage. User-friendliness was our main focus when developing the product and something that we always try to take to the next level and improve. With the user in mind, we use an API-led connectivity approach, which means that all environments, data, devices and apps can be managed completely transparent. Nodinite also offers unified tracking across on-premise and cloud with end to end monitoring, as well as the possibility to create your own reports using Power BI, Excel or QlikView. Included is also a repository model where you can document all the facts connected to every integration i.e. who to call in case of disruption, SLA level, owner etc.

Nodinite provides:

- Documentation that matters
- Logging end to end
- Monitoring end to end
- Flexible reporting
- Compressed and encrypted archiving
- Controlled and audited access to data
- A simple and intuitive self-service interface
- A fixed price solution
- User profiled dashboard

TAKE CONTROL OF YOUR WORKFLOWS

One tool with many features
- **Documentation**
- **Logging**
- **Monitoring**

Gives you a clearer view of the process

Get a manageable and and well-defined business transaction flow that simplifies the support and maintenance work. Nodinite documents your system integrations and gives you a clear view of the process. Through graphical models it is always easy to understand the flow of information, which will save you a lot of time and effort. The repository data will be sent directly to you and you get the right information at the right time.

Logs everything you need

All the information that flows through your integration platforms can be logged and archived. Nodinite logs what you want, as much as you want, for as long as you want. Logged messages are also compressed to conserve space and is encrypted to prevent unauthorized access to the data.

Tells you when something is wrong

Nodinite monitors all resources part of the system integration chain, end to end. It always alerts relevant users when an error is detected and stores your alert history, so it is easy to access whenever you want. Malfunctions can be fixed using the remote-control center wherever you are.

You are in control of the information

Nodinite provides great flexibility in terms of user access to information and it is adaptable to your specific needs. An administrator controls how much access a particular user or role/group have to the information, either full administrative rights or partial access. All users will get the right information at the right time.

Brings your data to life

Transform your company's business critical transactions into real time decision support with rich visuals. Stay in the know, spot trends as they happen, and push your business further.

Nodinite provides a foundation, from which you can create your own reports using the tool of your choice, for example Power Bl, Excel or Qlikview.
