

“ Easy to use and the functionality you need ”

CUSTOMER

ATEA

BACKGROUND

Atea ASA, is a Nordic IT infrastructure company. It's headquarters is located in Oslo, Norway. The company sells, installs, and supports products from Citrix, VMware, Apple, Cisco, HP, Microsoft, Lenovo, IBM, Readdle and others. Andrejs work in the unit of Development and operations of Group

IT integrations which are responsible for planning of integrations for the whole of the ATEA Group. "We elaborate common standards for how any integrations should be requested, developed, amended, deployed, monitored and operated. Only in the BizTalk 2013 integration platform, Atea handles 15-20 million transactions per month excluding transaction taking place on other (API) platforms, excluding other Atea integrations."

ANDREJS SKITECKIS
Head of Integration
Services at Atea Group IT

**INTEGRATION
PLATFORMS USED**
Biztalk and iCore

The functionality you need

“ We are using Nodinite to monitor and log all BizTalk integrations. A lot of transaction data is stored, and the self-service is used extensively.

“ It easy to see trends, identify problems and implement solutions before any problems occur. The reports become an important input for planning actions that will prevent problems in the future.

Saving time and easy to use

“ By using the Nodinite self-service function we are saving the IT group many hours since it allows us to search and find transactions by ourselves without having to make a request to the central IT group. We have a couple of log views configured where we for instance can look for specific orders.

A smooth system with alerts for certain events

“ The monitoring functions gives alerts for certain events that ATEA has set triggers for. The alerts/alarms generate emails to defined email distribution groups, urging them to take necessary actions. ATEA plans to use “Webhooks” to generate troubletickets handled in the normal ticket flow which will further improve efficiency.

Facilitates identification of problems and trend analysis

“ As a manager Andrejs really likes the grouping feature of logging. It makes it easy to generate reports e.g. per integration, per timeperiod (day, week, month, etc). The report could typically include number of faults, type.

Scaling up the usage

“ ATEA plans to increase the usage of Nodinite™ to all integrations and other services throughout the entire ATEA group.
